TECHQUITY

Web Application Development Log

Design Section

Project link on Github:
https://github.com/mayy-z/website.git

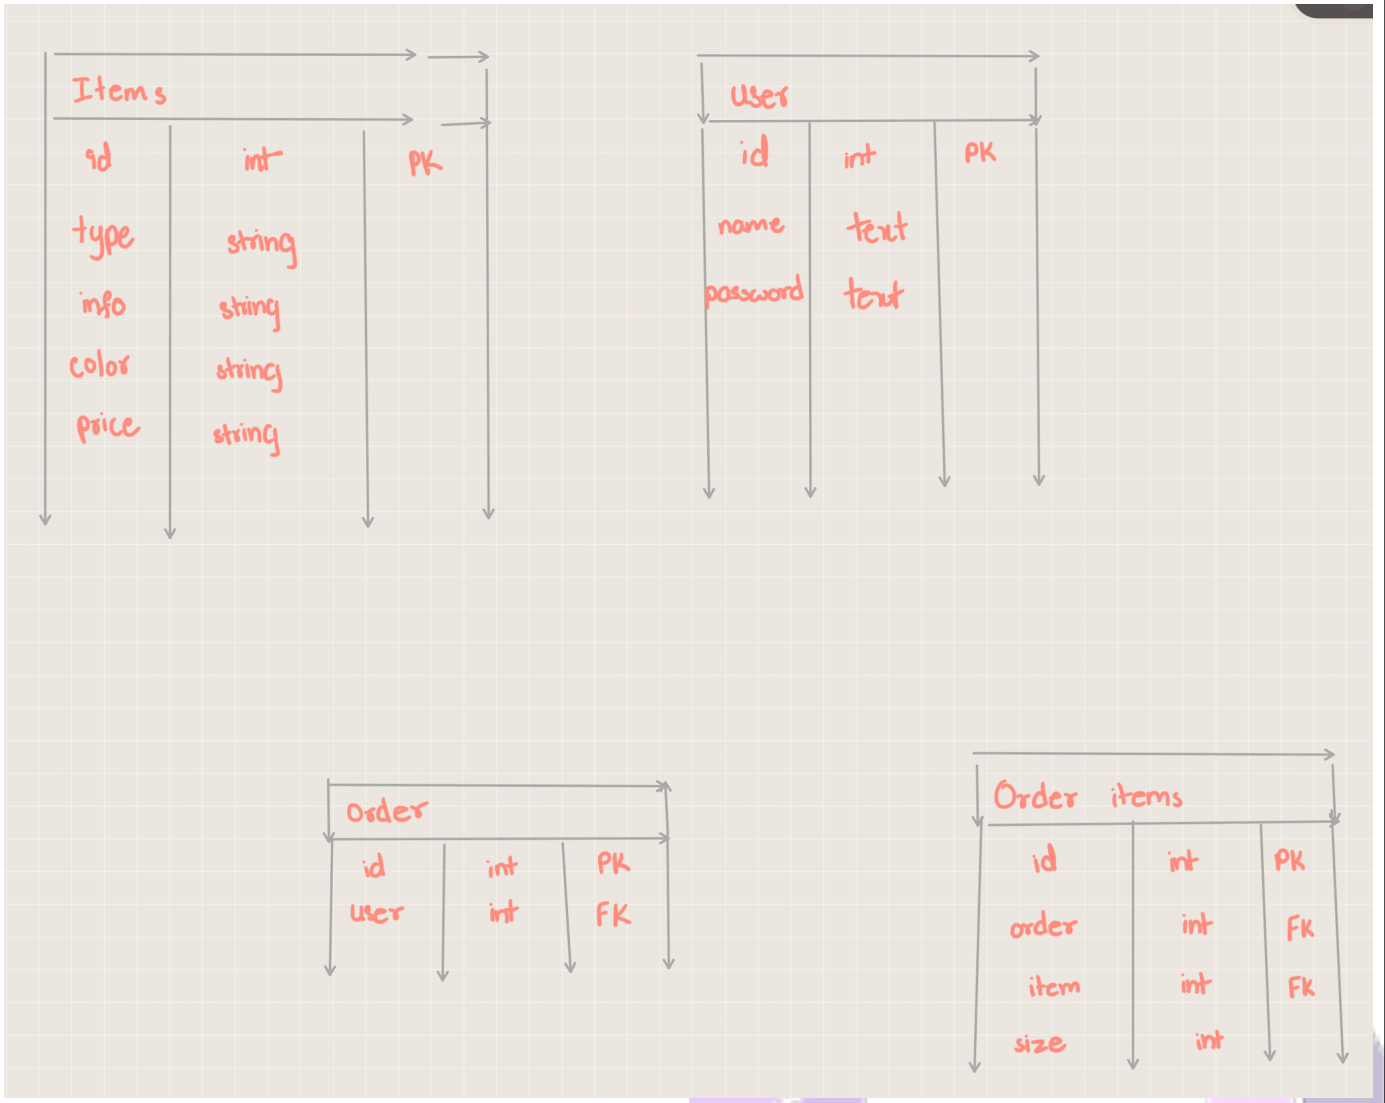

Project name:
Fashion Haven

Attribution-NonCommercial-ShareAlike 4.0 International (CC BY-NC-SA 4.0)
www.techquity.co.nz

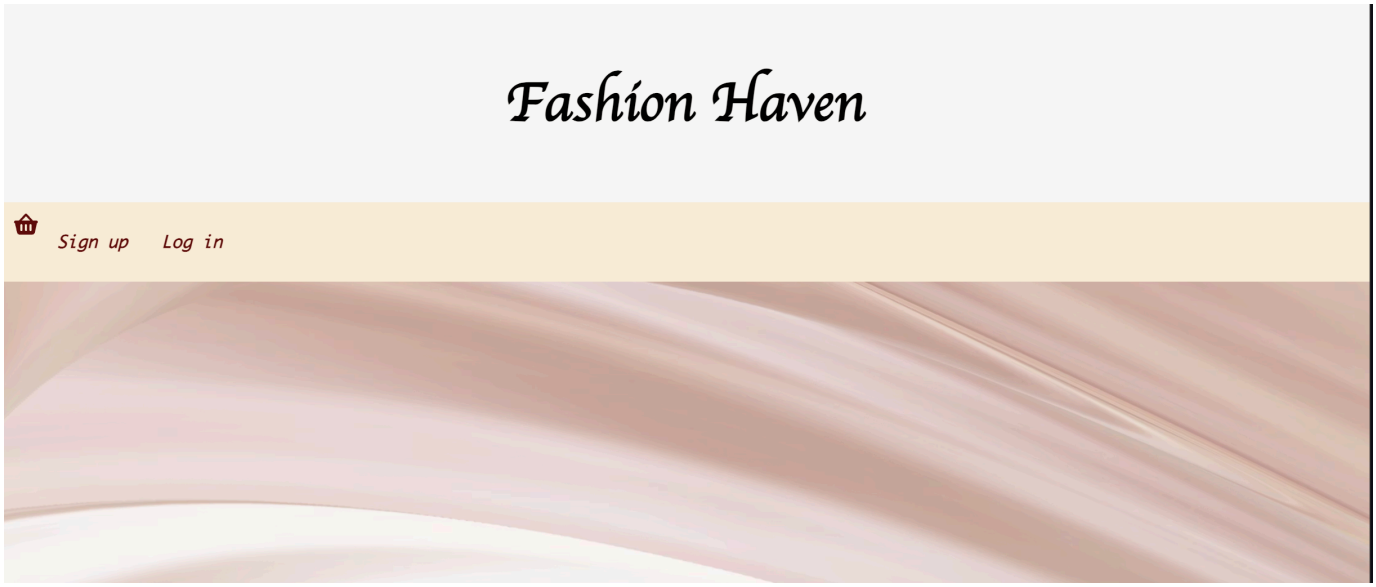

Project Summary: Include purpose and target audience
The purpose of this website is to create a page where teenagers or young adults can buy clothings at a cheap price. People can order clothings easily and it should be easy and simple to use and navigate as there won't be many steps to order anything they want.

Initial Database Design ERD:

Attribution-NonCommercial-ShareAlike 4.0 International (CC BY-NC-SA 4.0)
www.techquity.co.nz

WebPage Design- Wireframe and/or Palette

Relevant Implications (explain at least 3)- Before Development.

Aesthetic- Aesthetic plays an important role as without it, users can't focus on the main message which will make them lose interest. In order to do this, I will make my my website look pleasant and clean so that it won't be an eyesore to look at. I also want it so that it is easy for the user to find what they are looking for without getting confused. In order to do that, I won't use the same shades of colour on top of each other and use different colours instead, so that people can identify what they are looking up.

Accessibility- Accessibility is there to make sure that anyone can do a basic task without any difficulty. Everyone should be able to access the website easily and use it to order anything they desire. To do this, I will make the buttons and the texts big enough for people to read it clearly and use the fonts that everyone can read. People should be able to order more than one clothes of the same one or less just by clicking a '+' or '-' item instead of them having to type it in.

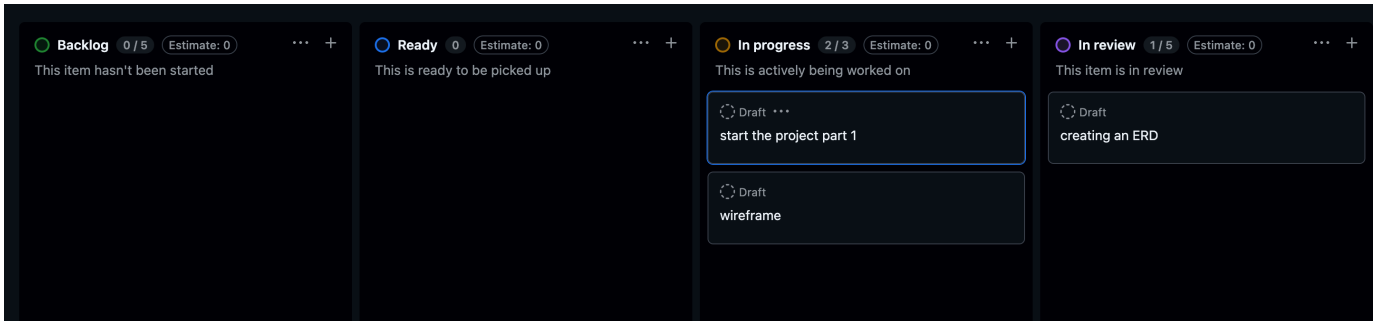

Privacy- Privacy is important to every user as without it, the data can expose people unintentionally such as their passwords and emails. To make sure that every user has privacy, I will make sure that everything that each users order or added in their cart should be private to anyone but them. The clothes that the users are viewing or viewed shouldn't been seen by the public. The passwords that the users signed up with should be private.

Attribution-NonCommercial-ShareAlike 4.0 International (CC BY-NC-SA 4.0)
www.techquity.co.nz

Sprint #1

Sprint #1 Goals

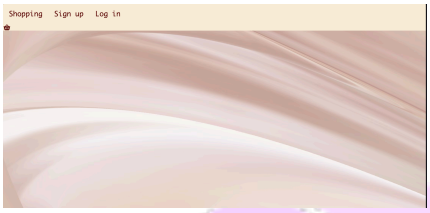

(before starting sprint 1):

The goal for my first sprint is to set up 'order, sign up, and sign in' options. But you wont be able to see anything if you clicked them yet. Another goal is to view clothings, but you wont be able to click them, view the clothings' informations in detail or order them yet.

Sprint #1 Testing

Include tests for everything in your application including all links, input forms, correctness of data and correctness of queries. Add more columns as required.

Testing Table			
What are you testing	**How are you testing it**	**Expected Result**	**Pass/Fail**
The sticky nav bar	By scrolling down as it should stay at the top no matter what	 `.navbar { position: sticky; top: 0; overflow: hidden; padding:0px; margin: 0px; }`	Pass
The hover	Hover my curser on top of a button	 `.navbar a:hover{ background-color: rgb(179, 166, 148); color: #ffffff; }`	Pass

Attribution-NonCommercial-ShareAlike 4.0 International (CC BY-NC-SA 4.0)
www.techquity.co.nz

The shopping cart	Checking if it is in the right place		Fail (because it is not supposed to be there)
			Pass (I signed up and used the code they gave me)

Sprint #1 Review

Progress Review (100+ words)
Sprint 1 did not turn out as I expected, since I was expecting to get sign in/ sign up page done, but I am satisfied with the aesthetics. I am able to make a website page where you can view the page which is aesthetically pleasing. You could only view the buttons of sign in, sign up and ordered items. I also made sure that the brand name is large and visible for people who has difficulty with their eye sight. However, I should have made it better by adding the layout and pictures of the clothes that are going to be available. I will also be making sure you can view the details of the clothing and finish up the sign in/ sign up page by the next sprint. By doing this, it will improve the usability and aesthetics.

Attribution-NonCommercial-ShareAlike 4.0 International (CC BY-NC-SA 4.0)
www.techquity.co.nz

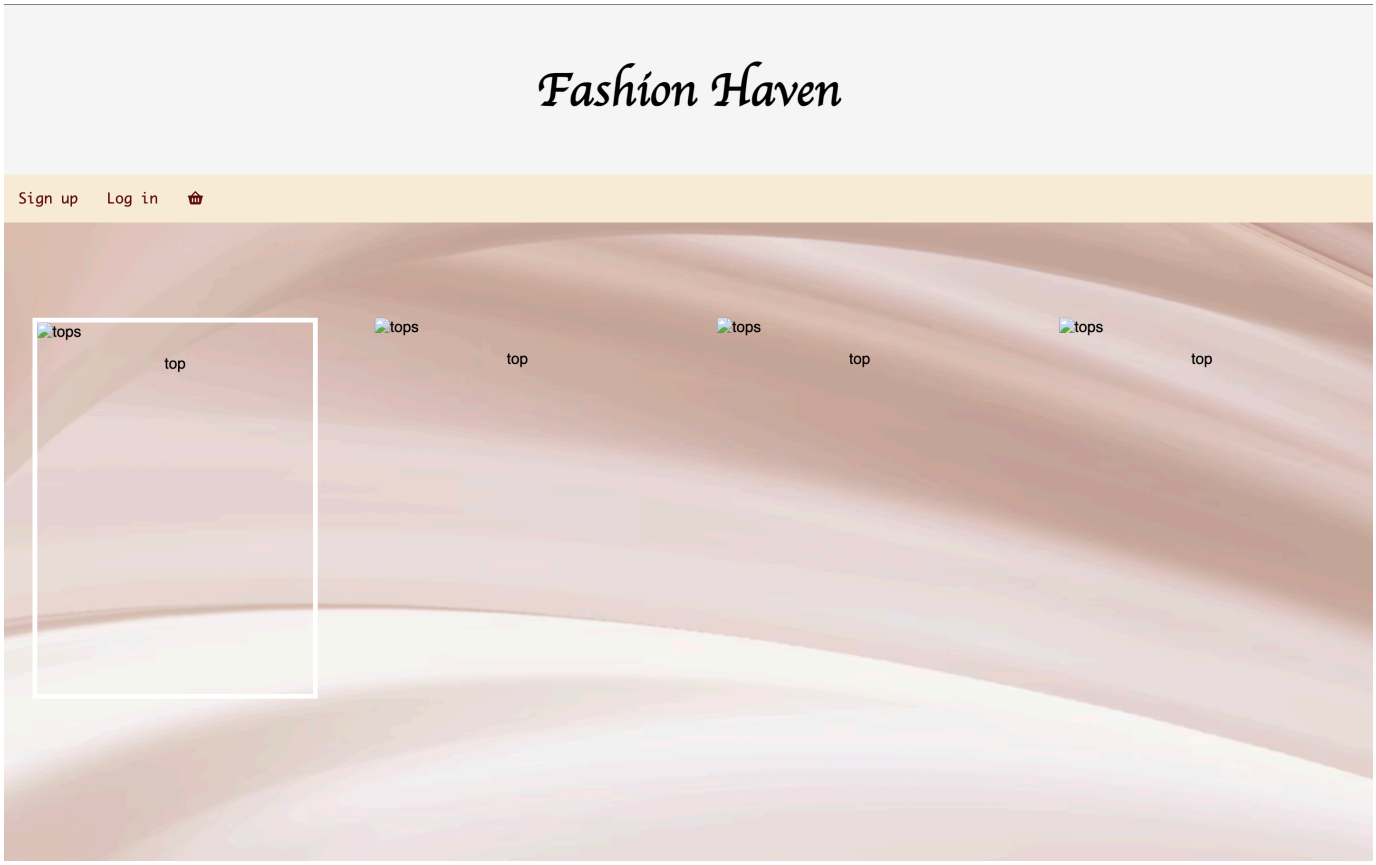

Sprint #2

Sprint #2 Goals **(before starting sprint):**
-make sign up /sign in page assessable -make the pages of clothing clickable

Database improvements (if any otherwise delete box)

Attribution-NonCommercial-ShareAlike 4.0 International (CC BY-NC-SA 4.0)
www.techquity.co.nz

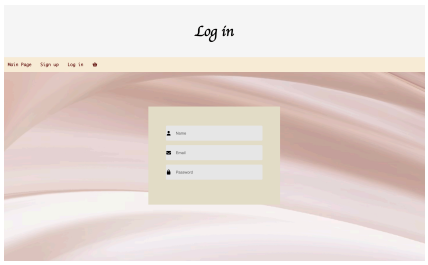

WebPage Design Improvements (if any)- Wireframe/Sketches/Pallette/Font etc

Attribution-NonCommercial-ShareAlike 4.0 International (CC BY-NC-SA 4.0)
www.techquity.co.nz

Sprint #2 Testing

Include tests for everything in your application including all links, input forms, correctness of data and correctness of queries. Add more columns as required.

Testing Table			
What are you testing	**How are you testing it**	**Expected Result**	**Pass/Fail**
The sign up page	By clicking it as it should open up another page		Fail (it should open up another page, but is the same page as before.)
			Pass (I changed the block content to block heading)
The log in page	Should open up another page	 	Pass
Duplicate structure	Should have rows of the same structure		Fail
			Pass (added the code in css instead of html)

Attribution-NonCommercial-ShareAlike 4.0 International (CC BY-NC-SA 4.0)
www.techquity.co.nz

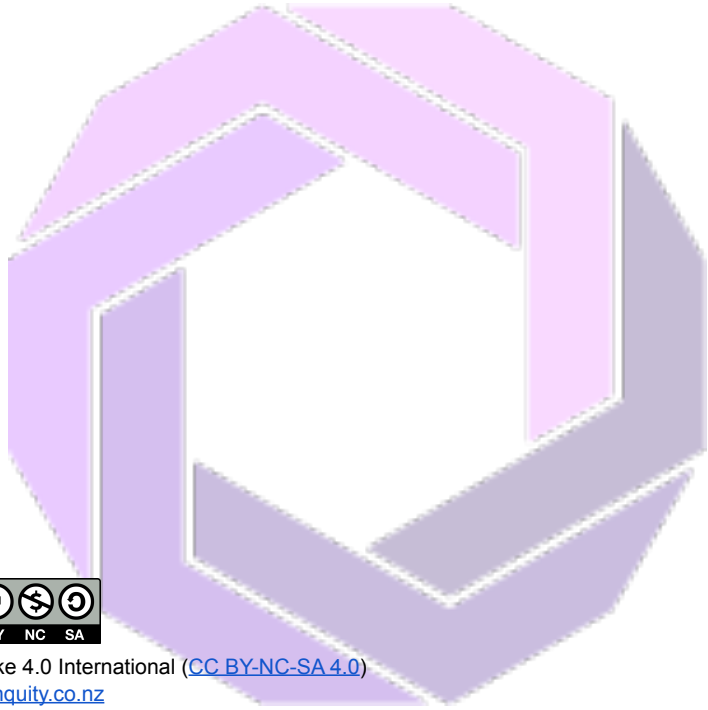

Progress Review (100+ words)
I managed to finish up the sign in/ up page. I am happy with the aesthetics and the fully functional sign up or log in page. The website now gives you an option to sign up or log in if you have already signed up. This will play a greater part for the vision that I have in mind. Another thing that I could have done better was to make the users log in before they are allowed to view the clothes. I will also be making somewhat similar to it, which should take the user immediately to the log in page. By adding this, it will improve the usability.

Sprint #3 Testing

Include tests for everything in your application including all links, input forms, correctness of data and correctness of queries. Add more columns as required.

Dynamic routes

Testing Table			
What are you testing	**How are you testing it**	**Expected Result**	**Pass/Fail**

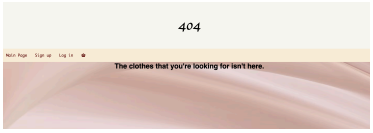

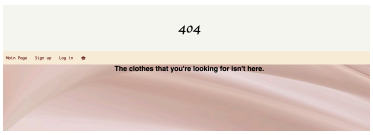

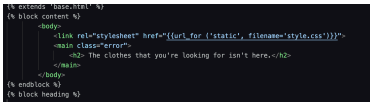

Dynamic routes	By clicking on the clothes	**This is a single page**
		This is the page for item 2. A shirt
		`{% extends 'base.html' %}`
		`{% block content %}`
		`<h1>This is a single page</h1>`
		`<p>This is the page for item {{item_name[0]}}. A {{item_name[1]}}</p>`
		`{% endblock %}`
			Pass

Testing the boundary on dynamic routes	Typing in the id number that is not in the sql (0)	“Item not found”	Fail

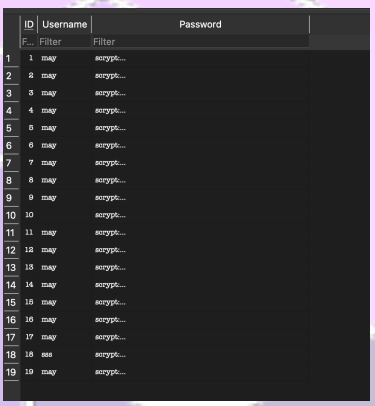

Attribution-NonCommercial-ShareAlike 4.0 International (CC BY-NC-SA 4.0)
www.techquity.co.nz

Type in the random id	By choosing the id which is in the sqlite and testing if the route works	Show me that id page that I typed in	Pass
Testing the boundary on dynamic routes	Typing in the id number that is not in the sql (17)	“Item not found”	Fail
Testing the boundary in dynamic routes	Typing in the id number that is in the sql (3)	Show me the correct id page that I typed in	Pass

404 page

Testing Table			
What are you testing	**How are you testing it**	**Expected Result**	**Pass/Fail**
Random strings should bring you to 404 page	Adding random strings at the back		Pass
Style	Running the program		Fail (I do not have the screen of before but the styles are not added)
	I fixed the link to the stylesheet		Pass

Sql testing

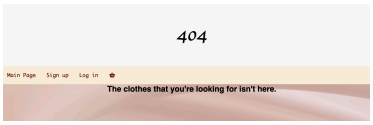

Testing Table			
What are you testing	**How are you testing it**	**Expected Result**	**Pass/Fail**
	This should insert the new data into the database when typed in		Pass

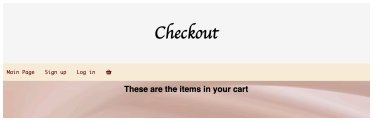

Attribution-NonCommercial-ShareAlike 4.0 International (CC BY-NC-SA 4.0)
www.techquity.co.nz

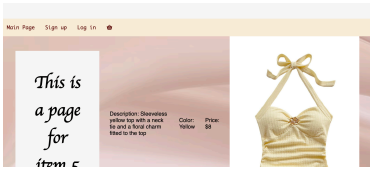

`sql = "SELECT * FROM user WHERE Username = ?"`	This should find the matching username and password from the database to log in	Logged in successfully	Pass
`sql= f"SELECT * FROM Item WHERE id={id}" #TOOO remove f-string`	Open a selected item from the database		Pass

Python

Testing Table			
What are you testing	**How are you testing it**	**Expected Result**	**Pass/Fail**

`@app.errorhandler(404)`
`def page_not_found(error):`
`  # Pass the 404 status code as the second return value`
`  return render_template('404.html'), 404`
	It should open up the 404 page		Pass

`@app.route('/checkout')`
`def checkout():`
`  return render_template('checkout.html')`
	Should open up the checkout page		Pass

`@app.route('/item/<int:id>')`
`def single_item_name(id):`
`  sql= f"SELECT * FROM Item WHERE id={id}" #TOOO remove f-string`
`  item_name = query_db(sql, one=True)`
`  return render_template('single_item_name.html', item_name=item_name)`
	Should open up an individual page matching with the id		Pass

Sign in/ Log in page			
What are you testing	**How are you testing it**	**Expected Result**	**Pass/Fail**

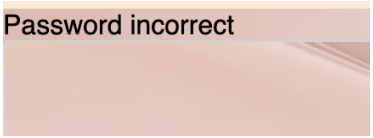

Sign up button	Writing in my name, email, password and signing up	Pop up the message saying “sign up successful”
		`session['Username'] = user`
		`flash("Logged in successfully")`
		`else:`
		`flash("Password incorrect")`
		`else:`
		`flash("Username does not exist")`
			Pass

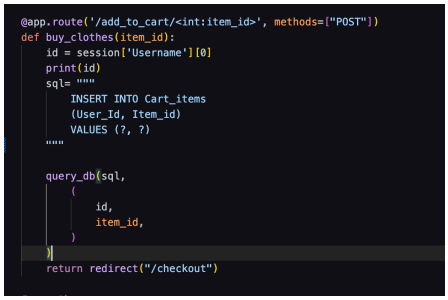

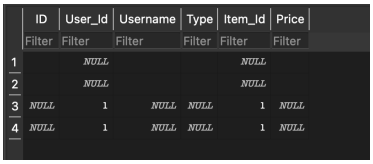

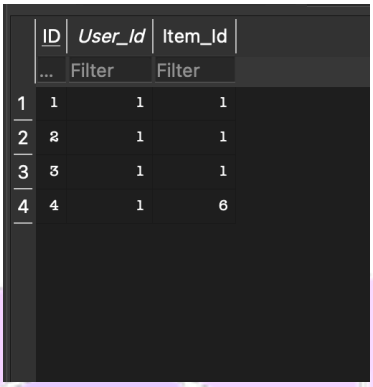

Log in button	Write my name, email, password the same as my sign up account to log in	Pop up the message saying “Log in successful”
		`session['Username'] = user`
		`flash("Logged in successfully")`
		`else:`
		`flash("Password incorrect")`
		`else:`
		`flash("Username does not exist")`
			Fail

	I fixed it by removing the quotation marks around “name”	`user = query_db(sql=sql,args=(name,),one=True)`	Pass

Redirect to the main page	Log in and if it is successful, it should redirect to the main page	`if check_password_hash(user[2],Password):`
		`#we are logged in successfully`
		`#Store the username in the session`
		`session['Username'] = user`
		`flash("Logged in successfully")`
		`print("Logged in successfully")`
		`redirect_location = request.args.get('redirect')`
		`return redirect("/")`
			Pass

Attribution-NonCommercial-ShareAlike 4.0 International (CC BY-NC-SA 4.0)
www.techquity.co.nz

Log in	Texted it again but keeps saying 'password incorrect' even though it is.		Fail
	Changed the capitalisation along with username and password		Pass

Checkout page			
What are you testing	**How are you testing it**	**Expected Result**	**Pass/Fail**
	Add the clothings into the cart		Fail
	Brings you back to the login page before you could add the clothes into cart		Pass
Query the selected clothes into the db	Check the db		Pass

Final Review

What were the results of your testing? Did you get through all that you expected to? What is causing problems? What went well? What was a challenge? What would you do differently if you had a chance?

Discuss how planning, testing and trialling led to the development of a high-quality digital technologies outcome.

Attribution-NonCommercial-ShareAlike 4.0 International (CC BY-NC-SA 4.0)
www.techquity.co.nz

Overall, the website mostly turned out as I had intended. Most of my features are functioning well but testing and trialing them helps me see the area which needs improvement. I managed to finish most of the functions that I had in mind but there are certain things that need fixing.

What went well: The usability is smooth. You can sign in/sign up. You can click on each of the clothes to see their description, colour, price and to add to cart. While adding to cart, If you haven't logged in already, it automatically takes you to the log in page. This saves lots of times for the users. Checking for any errors by testing and trialing and fixing them helps prevent most of the errors from taking place on the user's side. The layout and the colours fit exactly what I had in mind when I drew it down. I did end up adding an extra page, which is known as '404' to keep the users informed if they face any errors.

Challenges: I spend a lot of time trying to figure out how the forms work. After I added an alert which tells you if you have signed in or not, it wasn't allowing me to log in. So I spend days trying to fix it without getting rid of the alert and now it works. Then later, I added a redirect route to the log in page make sure that the users are not signed in are signed in before they can add an item to their cart. However, it keeps sending the users back to the log in page even after they had logged in.

Another chance: If I was given another chance, I would use it to improve the aesthetics in the single item pages. I would also make sure that the users can see what items they have in their cart, along with the description and price. I would add the button to actually order the clothes. I would also make sure that the users are logged in longer, instead of having to log in every time they revisit the page.

How I addressed the Relevant Implications

As discussed before the project, what relevant implications had you identified at the beginning and how did you manage to address them as you went. Were there any others that you came across while making this game? How did you manage to address them? 100+ Words

Attribution-NonCommercial-ShareAlike 4.0 International (CC BY-NC-SA 4.0)
www.techquity.co.nz

I identified the relevant implications of aesthetic, accessibility and privacy. I addressed the aesthetic by sticking to a colour scheme and making it aesthetically pleasing for the users. I also make sure to include symbols and make the heading big to make sure that users won't get confused easily.

I addressed the accessibility by making sure to alert the users if they had successfully signed in/up or if their password is incorrect. This makes their life easier as they don't have to guess if they run into any problems. If they tried to add a clothing into cart without logging in, I make sure that the website automatically brings the user there. I also added a 404 page so that the users are kept informed if they ran into any errors.

I addressed the privacy by making sure the passwords are hashed when the users typed it in, either during signing up or logging in. They have an option to either save their password or not. I encrypted the password in the database so that even if someone gets into the database, they won't be able to see the user's passwords.

Marking Schedules: For Teacher use only

AS91892- Use advanced techniques to develop a database

Credits: 4 (internal)
NZQA: https://www.nzqa.govt.nz/nqfdocs/ncea-resource/achievements/2019/as91892.pdf

Achieved- Develop a digital outcome to manage data	**Evidence**	✓
designing the structure of the data	Made an ERD	
using appropriate tools and techniques to structure, organise, query and present data for a purpose and end user	Competently normalized data structure Multiple queries across linked tables Basic Python CRUD functionality with text input/output	
applying appropriate data integrity and testing procedures	Testing Logs. Do the queries work and return what is expected?	
Explaining relevant implications.	Relevant Implications Questions answered appropriately	
Merit- Develop an informed digital outcome to manage data		
using information from testing procedures to improve the quality of the database	Suggested improvements implemented- improve database design, add or refine entities or tables and relationships Made improved ERD(s)	
structuring, organising and querying the data logically	No problems with structure and datatypes in the table. No wildcard queries, JOIN's used efficiently. 2NF at least.	
addressing relevant implications.	The outcome addresses the relevant implications mentioned	
Excellence- Develop a refined digital outcome to manage data		
iterative improvement throughout the design, development and testing process	Improved functionality of database and refinements to structure of the data.	
presenting the data effectively for the purpose and to meet end-user requirements.	Very refined outcome providing all needed functionality

www.techquity.co.nz

TECHQUITY

AS91893 - Use advanced techniques to develop a digital media outcome

Credits: 4 (Internal)
NZQA: https://www.nzqa.govt.nz/nqfdocs/ncea-resource/achievements/2019/as91893.pdf

Achieved	**Evidence**	✓
using appropriate tools and techniques for the purpose and end users	Coded a website in HTML and CSS. Looks and functions mostly like intended in the design.	
applying appropriate data integrity and testing procedures	It functions as intended and the right pages show with the correct data when the links are clicked	
using relevant conventions for the media type	Site has basic usability (HCI)	
explaining relevant implications.	Relevant conventions section completed adequately	
Merit		
using information from testing procedures to improve the quality of the outcome	Testing and sprint reviews show evidence of specific improvement made based on the testing. No lorem ipsum anymore!! Accurate Data	
applying relevant conventions to improve the quality of the outcome	Decent HCI. Eg. generally shows “consistency and standards”, and/or “help and documentation” by having an about page.	
addressing relevant implications.	Has met relevant implications like NOT used copyright material, addresses privacy by keeping data safe (eg hashed passwords) etc.	
Excellence		
iterative improvement throughout the design, development and testing process to produce a high-quality outcome	Must be high quality. No obvious errors or inaccurate data.	
using efficient tools and techniques in the outcome’s production.	Kept a good log, used github to keep backups and record of work, lots of commits on github.

www.techquity.co.nz

TECHQUITY

AS91896 - Use advanced programming techniques to develop a computer program

Credits: 6 (Internal)
NZQA: https://www.nzqa.govt.nz/nqfdocs/ncea-resource/achievements/2019/as91896.pdf

Achieved	**Evidence**	✓
writing code for a program that performs a specified task	Applications works as intended.	
using advanced techniques in a suitable programming language	“creating methods, functions, or procedures that use parameters and/or return values” flask requires that “responding to events generated by a graphical user interface (GUI) ”- links in webpage run routes that do queries “using additional non-core libraries”- using Flask.	
setting out the program code clearly and documenting the program with comments	Some code comments, code layed out relatively cleanly with constants/variable at the top, routes and functions after.	
testing and debugging the program to ensure that it works on a sample of expected cases.	Testing table shows the basic web page functionality was tested.	
Merit		
documenting the program with appropriate names and comments that describe code function and behaviour	Good variable and function names. Good and plentiful code comments.	
following common conventions for the chosen programming language	PEP8 Followed. Use Pylint or similar and check linting.	
testing and debugging the program effectively to ensure that it works on a sample of both expected cases and relevant boundary cases.	Lots of testing including request for non-existent id returning an error 404 page.	
Excellence		
ensuring that the program is a well-structured, logical response to the specified task	Enhanced program, e.g. functions that aren’t routes to make the code cleaner (eg query_db). Neat and logical code.	
making the program flexible and robust	Great structure making code easy to extend. Unbreakable code. Eg. Error-404 and error 505 handlers	
comprehensively testing and debugging the program.	Unbreakable code with a lot of tests done for every testable element of the program including unexpected input like a non existent route or page returning custom error 404 handler
